

Ferrier Coupler

Ferrier Coupler, Inc. has developed the Ferrier Coupler. This device allows the amputee to quickly change prosthetic feet or knee-shin systems. With the turn of a key (or a nickel), the entire lower section of the prosthesis can be removed without having to remove the socket from the limb. This can assist in comfort while sitting in confined areas. It can also allow for the change from different types of feet – such as athletes changing from a running foot to a walking foot.

For more information on the Ferrier Coupler, please visit their website at:
